

Comprehensive Video Atlas Of Flap Planning

Effective flap planning is the first step toward effective flap execution!

Flap planning is far more than simply drawing a flap for a defect on a paper. It is a systematic process of analysing the defect, identifying relevant anatomical landmarks and vascular axes, designing the template, determining its pivot and arc of rotation, and ensuring that the flap will reach and adequately cover the defect.

Despite being a fundamental skill in plastic and reconstructive surgery, flap planning often doesn't get the importance it deserves. There is little emphasis on the structured process of translating anatomical knowledge into a practical plan for an individual defect.

This focused video module brings flap planning to the clinical setting. A wide range of common and uncommon flap planning across all anatomical regions is demonstrated providing a practical, hands-on understanding of how flap planning is performed in real-life clinical situations.

What is covered?

- ✓ **The Flap Planning Checklist : a structured approach to a comprehensive and reliable flap plan**
- ✓ General Principles & Common Errors in flap planning
- ✓ **Planning of flaps for Head, Neck & Face**
- ✓ Planning of flaps for the Upper Extremity
- ✓ **Planning of flaps for the Lower Extremity**
- ✓ Planning principles for Abdominal flaps
- ✓ **Planning for free flaps**
- ✓ Selected Case Discussions
- ✓ **And much more...**
